

How To Share Your Medical Records On ZOOM With VIOS

Follow this guideline on how you can easily show the specialist your latest medical reports, scans and primary reports, let your specialist view the scanned records as you are having your virtual visit.

Before you book an online appointment

Gather all of your health data records, such as lab reports, x ray scans, MRI reports and any copies of patient records your primary doctor may have prepared for you.

Keep your Scanned Records in your Laptop

After scanning the documents, you can email them to yourself and then download those files to your laptop.

- Keep them in a separate folder on your desktop so you can find them later.
- Don't forget to label them
- It helps if you mention the date you had the scans and blood tests done

1 Visit the VIOS Clinic

Go to viosapp.com and select the specialty that can help you

2 Select your Specialist

Click on the button **'Book an Appointment with.....'** to view their availability

- Select the time
- Pay online

3 Check your Email

You will receive a booking confirmation in your email

4 Join the Zoom Meeting

You may be asked about your health history and then the Provider will ask you to share any relevant health data.

5 Sharing Your Medical Records During Your Telemedicine Appointment

Live screen-share during the zoom meeting

This is recommended as you do not have to worry about:

- Sending sensitive health data to another person
- Avoid the risk of sending corrupted files to another computer
- You still have full ownership of your health data and you are in control of what you want your specialist to see.

6 Concluding your Telemedicine Visit

Your Specialist will now provide you with their expert medical second opinions, counselling advice or recommendations for treatments.

You may share their views with your primary provider and decide on the best course of action

Follow us for exciting new updates to our Global Telemedicine Platform
